### Closed System Engineers Test Kit

Due to its heat absorption capacity, water is the preferred cooling medium in many areas of industry. However, water always contains many dissolved and undissolved substances that can cause trouble even when travelling in closed cooling circuits. Extensive water treatment or chemical post-treatment by experts is always necessary. Problems are mainly caused by deposits, corrosion and microbiological activities. For the experts, a regular check of certain parameters is therefore just as essential as reliable equipment.
